

Unlocking Real World Assets for
Everyone Without Losing Privacy

Stellar WA Residency 2026

Zero-Knowledge Proofs (ZK) Track

Pitch Deck

The Problem

High-yield real assets exist in
Emerging Markets..
BUT investors can't access them.

- *Exclusive access*
- *Low trust*
- *High minimums*
- *Weak governance*

Result: Trillions in assets. Billions in demand. Almost no trusted rails.

The Solution

Buildvest lets people invest in well-titled, income-producing assets — from \$100 (#150k).

Go-to-market

- **\$20B+** credible alternative assets in WA
- **\$21B/year** avg. Nigerian diaspora remittances
- Massive under-allocation to emerging market real assets

Initial focus: African diaspora inflows (US, UK, EU, Canada)

Missing Layer

Tokenization alone isn't enough — How do you verify investors without exposing their private data?

The critical gap in fractional asset investing isn't the technology to tokenize — it's the trust layer. Traditional KYC exposes sensitive personal and financial data. Investors deserve privacy-preserving verification that proves eligibility without revealing the underlying information.

Hackathon Focus

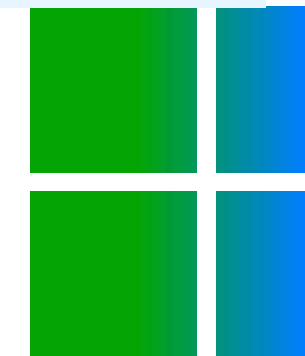

ZK Investor Qualification – building a simple circuit

Rule: Balance > \$1000 maintained for 3 months. Prove eligibility without revealing sensitive user data. Zero-knowledge proofs enable trustless verification.

Privacy + Compliance Synergy – building the proof verification

Meet regulatory requirements while protecting investor privacy. ZK proofs verify qualification criteria without exposing bank statements or personal financial details.

How It Works

Statement Extract

BANK DATA SECURELY PARSED

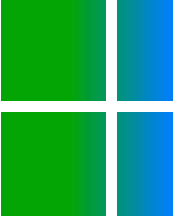

ZK Proof Verify

ELIGIBILITY VERIFIED PRIVATELY

Trust Upgrade

INVESTOR TIER ELEVATED

What We Built

Sandbox Development

Built in isolated BuildVest sandbox branch for safe experimentation. Enables rapid prototyping and testing without affecting production systems.

Modular Architecture

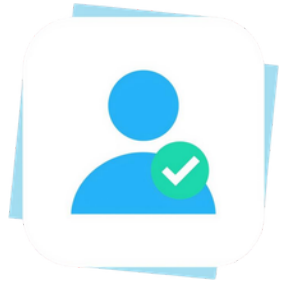

Separate frontend and backend systems designed for flexibility. Clean API boundaries ensure maintainable, scalable codebase.

Platform Integration

Planned seamless integration into main BuildVest platform. ZK qualification module ready for production onboarding flow.

Demo Setup

Investor1

Passes ZK qualification check. Balance > \$1000 maintained for 3+ months. Will be upgraded to PRIME investor status with full platform access.

Investor2

Fails ZK qualification check. Does not meet minimum balance threshold. Remains at RETAIL tier with standard access level.

Full tokenization on
Stellar

Demo Time

Signup Process

Walk through the seamless registration flow where new investors create their BuildVest account and submit their bank statement for ZK verification.

Prime Qualification

Watch the zero-knowledge proof verify investor eligibility in real-time, upgrading qualified users from RETAIL to PRIME status automatically.

Dashboard Outcome

See the final result: PRIME investors display their trust badge while accessing the same clean dashboard experience as all users.
